

# 1825 Portfolio 2

Commentary first quarter 2021

---

This summary provides market commentary from our investment experts, and details any changes made to Portfolio 2 during the first quarter of 2021. The commentary is intended to give you a general overview of the market, and does not constitute advice.

**In brief:**

- Vaccine rollouts and news of large-scale US stimulus supports global equities
- Developed markets outperform, with Europe one of the strongest regions
- Recovery-linked inflation fears lead to global government bond sell-off

## Environment

Global equities rose over the first quarter, with all major world indices posting positive returns. Worldwide Covid-19 vaccine rollouts raised hopes of a return to normality, and US fiscal stimulus further supported markets. This was despite fears of vaccine-resistant Covid-19 variants and rising concerns about inflation weighing on shares. UK shares fared particularly well, with the impressive domestic vaccine rollout driving sentiment. Over 30 million people in the UK had received their first vaccine dose by the end of the quarter. In line with increasing investor risk appetite globally, smaller companies outperformed their larger counterparts. However, emerging markets generally underperformed developed countries, but still rose overall. Inflation worries drove investor rotation out of ‘pandemic winners’ and into cyclical stocks and sectors that should benefit from an economic recovery.

Government bonds had a challenging quarter and fell globally. As the US House of Representatives approved President Joe Biden’s US\$1.9 trillion pandemic stimulus package, fears over inflation hit bond markets. With US inflation expectations hitting their highest level since 2014, investors sold government bonds. Long-dated issues in the US suffered the most. UK gilts were among the weakest performers, experiencing their worst quarter in over 20 years. Corporate bond returns were generally negative over the quarter, largely due to rising government bond yields (falling prices) across global markets. The first quarter was generally beneficial for sectors and issuers that have been most adversely affected by the pandemic, following the global rollout of vaccination programmes. Accordingly, high-yield debt outperformed investment-grade issues.

## Activity and performance

Please refer to Page 5 for a full breakdown of portfolio holdings.

### **Strategic Asset Allocation (SAA)**

Strategic asset allocation (SAA) yielded mixed outcomes during the first quarter with lower-risk portfolios faring less well than those portfolios able to take on more risk.

Fixed income asset classes proved somewhat of a minefield. Government bond prices fell and yields rose in most parts of the developed and developing world. Higher levels of economic growth and the expectation of economies reopening reignited fears of rising inflation. These were also stoked by increased levels of government spending after the Democrats succeeded in securing both houses in the US election. In the UK, the narrow avoidance of a ‘no deal’ Brexit compounded the situation, sending ‘safe haven’ gilts down 7.24%. Although UK investment grade bonds continued to benefit from a narrowing of spreads and a benign outlook for defaults, they too were negatively affected by the rise in gilt yields and declined 4.7%. In such an environment, even global high yield bonds – a strong driver of returns since financial markets bottomed in March 2020 – began to lose their lustre. They nevertheless managed to grind out a small positive return (0.65%). Looking further afield, a confluence of factors created headwinds for emerging market (EM) debt. These included a slower global vaccine rollout than hoped, the threat of further periods of lockdown and strengthening of the US dollar. The removal of the well-respected governor of the Turkish central bank also served to unsettle EM assets. Both hard currency (US dollar) and local currency bonds delivered negative returns, falling 5.96% and 5.63% respectively.

Stock markets were far more upbeat, generally performing well during the quarter. A rotation in leadership that began at the end of last year continued. Stocks, sectors and markets that have traditionally benefited from cyclical rebounds tended to perform the best; areas that benefit from a growth orientation did less well. Japan and Europe performed strongly in local currency terms – the Topix rose 9.15% and the FTSE World Europe ex UK gained 6.17%. Asia Pacific (excluding Japan) and EM equities were weak in comparison – the MSCI Asia ex Japan nudged up 2.61% and MSCI Emerging Markets 2.21%. US and the UK equity markets delivered respectable returns of 6.17% for the S&P 500 and 5.19% for the FTSE All-Share, but sat middle of the range over the three-month period. It is also important to highlight that although returns in local-currency terms appear attractive, sterling strengthened against most developed market currencies and by a considerable margin (7.5%) against the Japanese yen. This strength diluted returns for UK investors in the main.

### **Tactical Asset Allocation**

Tactical asset allocation (TAA) delivered a positive outcome during the quarter.

The Portfolio benefited from an underweight position in UK government bonds, both nominal and index-linked. At an asset class level, UK gilts were the largest detractor but the underweight position in nominal gilts and void in index-linked gilts helped to negate the impact. We redistributed our underweight in gilts to global high yield bonds. These managed to eke out a small positive return over the period, contributing positively to relative returns.

## Manager selection

Pleasingly, our fund selection was a positive contributor to performance during the first quarter.

The Portfolio enjoyed a strong period of fund selection. Infrastructure was an area of strength. The First Sentier Global Listed Infrastructure Fund delivered solid returns during a tricky time for alternatives given their implicit correlation to interest rate sensitivity. Within UK equities, the JO Hambro UK Dynamic, Lazard UK Omega, JPM UK Equity Core and TM Tellworth UK Smaller Companies Funds outperformed their respective benchmarks. Within emerging market equities, the Artemis Global Emerging Markets Fund continued a strong run of returns that began in the fourth quarter of last year. Most notable among weaker performers were absolute return funds. The ASI Global Absolute Return Strategies Fund gave back a little performance, as did the Invesco Global Targeted Returns Fund. The TM Fulcrum Diversified Core Absolute Return Fund continued to perform well, posting positive returns, but this was insufficient to offset weaker performances from other funds in the asset class. Elsewhere, performance suffered from passive funds lagging the market after fees and taxes. The Vanguard UK Government Bond Index Fund and L&G Emerging Markets Government Bond (Local Currency) Index Fund both trailed their respective benchmarks.

The comments above refer to the past. Past performance is not a reliable guide to future performance. As with any investment, the value of your portfolio can fall as well as rise – you may get back less than you pay in.

---

## Outlook

The ramp up of Covid-19 vaccine rollouts and China's rapid recovery added fuel to an expected sharp economic rebound in 2021. With a recovery in sight, investors moved into cyclical companies at the expense of growth companies in late 2020, which continued into 2021. Continued low policy rates and extra fiscal expenditure are supportive for equities. Low bond yields have underpinned equity valuations that look stretched. A sustained rise in long-term rates on inflation worries will likely cause spikes in market volatility. Vaccine setbacks, weak corporate earnings or policy mistakes could also cause sharp sell-offs.

Within fixed income, on the corporate bond side, increasing vaccine dissemination, along with huge US fiscal stimulus, is driving sentiment. However, less favourably, the expected strong economic rebound is stoking some inflation fears, putting upward pressure on core government bond yields. Most notably, the 10-year US Treasury yield has risen sharply from lows seen in August 2020. Since bond prices move in the opposite direction, continued yield rises would be unwelcome for both government and corporate bonds.
